CORE SKILLS

Backend

- C#, .NET
- REST APIs, WebSockets, SignalR
- PostgreSQL, MS SQL, MongoDB, Redis
- Entity Framework Core, LINQ
- OAuth2, OpenID Connect, JWT
- CQRS, DDD, Event-driven
- Clean/Onion Architecture, CQRS, DDD, Event-driven
- xUnit, NUnit

Frontend & Mobile

- TypeScript, JavaScript
- Angular, React
- React Native, Expo
- RxJS, NgRx, Redux
- HTML, CSS, SCSS

DevOps & Infrastructure

- Docker, Nginx
- CI/CD (Bitbucket)
- AWS S3
- Git, HashiCorp Vault
- Serilog, Sentry

EDUCATION

Master's in Computer Science

2023

NTU "KhPI" (2022–2023)

Bachelor's in Computer Science

Summary

Full-stack software engineer with 4 years of experience building web and mobile applications from scratch.

Proficient in .NET and TypeScript, delivering scalable and maintainable applications end-to-end.

Comfortable working in production environments, collaborating with cross-functional teams, and taking ownership of features from design to deployment.

Experience

ABNK Premium Systems — Full-Stack Software Engineer

06/2022 – Present

Project: Mobile content-based reading platform (iOS & Android)

- Designed and implemented the mobile and backend architecture from scratch
- Owned the full development lifecycle, including releases and app store publishing
- Made independent technical and architectural decisions under unclear and evolving requirements
- Built and maintained CI/CD pipelines and infrastructure for backend services
- Managed mobile releases, monitoring, and crash reporting
- Designed and implemented offline-first state management with cross-device data synchronization
- Maintained a fork of an open-source library, fixing complex issues and extending functionality to meet business requirements
- Covered core mobile business logic with tests
- Application is live in production and actively maintained

Stack: *React Native, Expo, TypeScript, Redux Toolkit, Jest, Sentry, .NET, Duende IdentityServer, PostgreSQL, Docker, Bitbucket Pipelines*

Project: CRM platform for social & educational sector

- Designed and owned backend architecture from scratch
- Independently built frontend from scratch, quickly mastering the framework to deliver a production-ready solution
- Served as the key engineer, mentoring team members and guiding architectural decisions
- Managed full lifecycle of releases, CI/CD pipelines, and production deployments
- Designed and implemented an interactive testing module for children (backend + frontend)
- Covered core domain logic with tests to ensure reliability
- Mastered IdentityServer4 and HashiCorp Vault, implementing authentication, authorization, and secure secrets management, significantly improving system security
- Provided user support and resolved production issues promptly
- System running in production across multiple instances and countries, supporting real users daily

Stack: *.NET, Angular, Redux, PostgreSQL, Docker, Bitbucket Pipelines, IdentityServer4, xUnit, HashiCorp Vault*

Early Project: Mobile game backend

- Refactored legacy backend code and optimized database structure
- Performed data migrations and gradual transition to a new data model
- Implemented new backend features

Stack: *.NET, MongoDB*

Robotec — Python Software Developer / Engineer

10/2021 – 01/2022

- Developed software for robotic systems using Python
- Worked with ROS and hardware integration
- Built and integrated robotic systems, combining hardware and software
- Designed robotic components in SolidWorks for assembly and integration
- Debugged software and hardware-related issues
- Provided client support, troubleshooting technical issues and assisting with product usage

Stack: *Python, ROS, Robotics, SolidWorks*
